ABSTRACT

The last in a series of General Accounting Office (GAO) reports that present a comprehensive review of the conditions of America's school facilities, this report organizes state-level information gathered from GAO work on school facilities into individual profiles for the 50 states and the District of Columbia. The report presents new information about the roles that individual states play in support of school facilities. Each profile describes the financial and technical assistance provided by each state as well as the facilities information collected and maintained by that state. Each profile also presents the following state-specific results from the GAO's 1994 survey of school facilities previously not available in a state-by-state format: the condition of school buildings and building features; the adequacy of environmental conditions; the extent to which facilities are meeting the functional requirements of education reform and technology; the reported range of amounts needed to bring schools into good overall condition; and the money needed to address federal mandates for managing and correcting environmental hazards and providing access to programs for the disabled. Data were obtained through two separate collection efforts: a 1994 survey of school-building conditions that elicited self-reports from officials at approximately 10,000 schools; and telephone interviews conducted in 1995 with state education agency officials in all 50 states. Appendices contain a guide for reading the profiles, a copy of the school survey, methodological notes, and 50 state profiles. (LMI)

The Honorable Carol Moseley-Braun
The Honorable Edward M. Kennedy
The Honorable John F. Kerry
The Honorable Claiborne Pell
The Honorable Paul Simon
The Honorable Paul Wellstone
United States Senate

This report is the last in a series¹ addressing your request for a comprehensive review of the condition of America's school facilities. The report organizes state-level information gathered from our work on school facilities into individual profiles for the 50 states and the District of Columbia.

This report presents new information on the roles individual states play in support of school facilities. Each profile describes the financial and technical assistance provided by each state as well as the facilities information collected and maintained by that state.

Each profile also presents the following state-specific results from our 1994 survey of school facilities previously not available in a state-by-state format²

- the condition of school buildings and building features;
- the adequacy of environmental conditions;
- the extent to which facilities are meeting the functional requirements of education reform and technology;
- the reported range of amounts needed to bring schools into good overall condition; and
- the money needed to address federal mandates for managing and correcting environmental hazards and providing access to programs for the disabled.

¹School Facilities: Condition of America's Schools (GAO/HEHS-95-61, Feb. 1, 1995); School Facilities: America's Schools Not Designed or Equipped for 21st Century (GAO/HEHS-95-95, Apr. 4, 1995); Technology: America's Schools Not Designed or Equipped for 21st Century (GAO/T-HEHS-95-127, Apr. 4, 1995); School Facilities: States' Financial and Technical Support Varies (GAO/HEHS-96-27, Nov. 28, 1995); School Facilities: Accessibility for the Disabled Still an Issue (GAO/HEHS-96-73, Dec. 29, 1995); and School Facilities: America's Schools Report Differing Conditions (GAO/HEHS-96-103, June 14, 1996).

²The state-level results from our 1994 survey of school facilities have been presented in prior reports in this series: GAO/HEHS-95-95, Apr. 4, 1995; GAO/HEHS-96-73, Dec. 29, 1995; GAO/HEHS-96-103, June 14, 1996.

In creating these profiles, we had to omit much contextual and explanatory information presented in the other reports in this series. Therefore, we have included three appendixes to assist the reader in understanding the state profiles. Appendix I provides a guide to reading the profiles, including definitions of terms and sources of the data shown. To show exactly what our survey of school facilities asked and how it was asked, appendix II presents a copy of the school survey. To help readers understand the many technical choices that were made in the design and analysis of the data, appendix III details the methodology.

Information for this report was gathered through two separate data collection efforts. Information on the condition of school facilities was gathered from our survey of school building conditions conducted in 1994. The survey was sent to a nationally representative sample of about 10,000 schools and included questions on the physical condition of buildings and the estimated costs to make needed repairs. The survey also included questions on spending needs to address federal mandates. These data were self-reported by school-level officials and not independently verified. All data for federal mandates are from estimates made by school officials on the basis of their understanding of these mandates. We did not attempt to verify the self-reported data nor did we attempt to assess the accuracy of officials' understanding of the mandates.

Information on state involvement in school facilities was obtained from telephone interviews we conducted in 1995 with state education agency (SEA) officials responsible for school facilities in all 50 states. These interviews focused on the financial and technical assistance states provided to local education agencies (LEA) and on the data states collected on the condition of their facilities. Although we did not independently verify the information reported to us by state officials, we provided the officials with a draft of the narrative section describing their state's program for their review. We incorporated their comments and included information they provided on recent changes to state programs as appropriate.

We administered our survey of school facility conditions from May to October 1994. We conducted our study of state involvement in school facilities from October 1994 to September 1995. Using information from these studies, we compiled this report from March to May 1996 and conducted our work in accordance with generally accepted government auditing standards.

As agreed with your office, unless you publicly announce its contents earlier, we plan no further distribution of this report until 30 days from the date of this letter. At that time, we will send copies to appropriate congressional committees and all members of the Congress, the Secretary of Education, and other interested parties.

Please contact me on (202) 512-7014 or Eleanor L. Johnson, Assistant Director, on (202) 512-7209 if you or your staff have any questions. GAO contacts and staff acknowledgments are listed in appendix LV.

Guide to State Profiles

Appendixes IV through Lrv contain profiles for each of the 50 states and the District of Columbia. The information in the profiles is taken from our 1994 survey of school building conditions (see app. II) and from interviews we conducted in 1995 with officials in each state education agency (SEA). For a detailed discussion of the methodology used in these studies, see appendix III.

Each state profile provides information on the (1) general education context for the state, (2) state's role in school facilities, (3) extent of facilities needs reported by schools, and (4) amounts schools reported spending and needing to spend to address federal mandates for managing/correcting hazardous substances and providing access to programs for the disabled. The following information is a guide to the data presented in each state profile.

General Context

This section presents background information obtained from a variety of sources. Because different information sources often produce slightly different definitions of common terms and different statistics on the same item, the following are definitions of the terms as we use them and a brief description of how we obtained the data.

Number of Schools

This is the number of public elementary and secondary schools located in each state. We obtained data for the 50 states from interviews with state officials. Data for the District of Columbia were obtained from the U.S. Department of Education, National Center for Education Statistics (NCES).³

Total Enrollment on or About October 1, 1993

This enrollment figure is the number of full-time equivalent (FTE) students enrolled in public schools in the state on or about October 1, 1993. We obtained these data from interviews conducted with state officials. Data for the District of Columbia were obtained from NCES and represent fall 1993 enrollment in public elementary and secondary schools.⁴ All enrollment numbers are rounded to the nearest thousand.

³Digest of Education Statistics 1995, U.S. Department of Education, NCES (Washington, D.C.: Oct. 1995), p. 105.

⁴Digest of Education Statistics 1995, p. 53.

**State Revenues for
Kindergarten Through
Twelfth Grade Education,
1993-94**

These revenues are revenues from state sources available for expenditure for public elementary and secondary schools for school year 1993-94. They include revenues for capital outlay and debt service and revenues for the SEA. These data were obtained from the National Education Association.⁵ We calculated revenues per student by dividing the total state revenues by the total enrollment. The actual (not rounded) figure for total enrollment was used for this calculation.

State Funding for Facilities

This refers to the amount of financial assistance provided by the state to LEAS for school facilities construction in state fiscal year 1994. We obtained these data from interviews with state officials. Amounts include both grants and loans to LEAS for capital outlay or debt service for school facilities construction, renovation, or major maintenance. The amounts do not include funding for maintenance and operations provided through basic education support programs and are not adjusted for any differences in construction costs among states. Ten states had no regular, ongoing program to assist LEAS with capital construction costs in state fiscal year 1994; these are noted by the phrase "no assistance provided."⁶ Officials in two states reported that the amount of financial assistance provided for facilities could not be determined; these are marked "unknown." One state did not report the amount of assistance it provided; this is noted by "data not provided."

**Number of SEA
Facilities-Related Staff**

This item gives the number of FTE staff in the SEA with responsibilities for school facilities. We obtained these data from interviews conducted with state officials. In two states (South Dakota and West Virginia), the FTES shown are not situated in the SEA but are in other state agencies that have the primary responsibility for school facilities. In three states (California, Hawaii, and Maryland), FTES in other state agencies with significant numbers of staff carrying out facilities activities are shown in addition to those located in the SEA.

⁵National Education Association, 1994-95 Estimates of School Statistics (Washington, D.C.: Apr. 1995), p. 38.

⁶Officials in two of these states (Missouri and Texas) told us that recent legislation had passed authorizing state financial assistance for facilities beginning after state fiscal year 1994. We provide details of these new programs in the section "State's Role in School Facilities."

**Other State Agencies
Involved in School
Facilities**

This item lists the state agencies outside the SEA that are involved at least to some extent in school facilities activities. This information was obtained from interviews with state officials.

**Percent of Schools
Reporting at Least One
On-Site Building in
Inadequate Condition**

We obtained these data from our nationwide survey of school building conditions. School officials were asked to rate the overall condition of buildings on an adequacy scale of excellent, good, adequate, fair, poor, or replace. The response categories fair, poor, and replace have been combined into a single category labeled inadequate. See survey question 10 in appendix II for the full text of this question and definitions of adequacy ratings.

**Percent of Schools
Reporting a Need to
Upgrade or Repair On-Site
Buildings to Good Overall
Condition**

We obtained these data from our nationwide survey of school building conditions. The overall condition includes both the physical condition and the ability of the buildings to meet the functional requirements of instructional programs. See question 11 of the survey (app. II).

**Reported Range of
Amounts Needed to
Upgrade or Repair a
School to Good Overall
Condition**

Our survey asked school officials to report the total cost of all repairs/renovations/modernizations needed to put their schools' on-site buildings into good overall condition. These figures show the range of the amounts reported by school officials. See question 11 of the survey (app. II).

**State's Role in School
Facilities**

We obtained the information in this section entirely from interviews conducted in 1995 with SEA and other state officials with significant involvement in school facilities.

Financial Assistance

This section discusses state financial assistance programs for school facilities. It includes state grant and loan programs to provide districts with capital outlay or debt service for school facilities construction, renovation, or major maintenance.

Technical Assistance

This section discusses the information and guidance states provide to LEAS on funding, construction requirements, planning and architectural matters,

education specifications,⁷ and other facilities-related issues. It also refers to compliance review activities carried out by states, including reviewing architectural plans and other documents for conformance with fire and building codes, education program specifications, or other state requirements.

Facilities Information

This section discusses the data states collect on the physical condition of school buildings as well as other types of facilities-related information they may maintain, such as building inventories. It includes data states collect on a regular, ongoing basis or information collected as part of a one-time study of school facilities.

Extent of Facilities Needs Reported by Schools

This section presents data obtained from ratings given by school officials to various aspects of school condition on our survey of school facilities.

Percent of Schools With Inadequate Facilities

This table shows the percent of schools in the state with at least one (1) inadequate building of any type, (2) inadequate building feature, (3) unsatisfactory environmental factor,⁸ and (4) inadequate building and one inadequate building feature. The latter is a proxy measure for the percent of schools in the state with the most serious facilities needs. The following describes the scales used and how we reported out responses.

Building Features

To rate the condition of buildings and building features, respondents were asked to use a scale of excellent, good, adequate, fair, poor, or replace. Responses of fair, poor, or replace were combined into a single category labeled inadequate. The list of building features included one item—life safety codes—that is not a feature in the conventional sense. However, school officials we consulted with during the survey design concurred that a major focus of facilities maintenance concerns and expenses was the school's meeting local codes to ensure the preservation of life and safety

⁷Education program specifications provide detailed requirements for school facilities needs such as large- and small-group instruction and properly constructed and outfitted science laboratories.

⁸The data for this analysis may differ slightly from data shown in other reports in this series. For the state profiles, we considered a total of eight environmental factors—lighting, heating, ventilation, indoor air quality, acoustics for noise control, flexibility of instructional space, energy efficiency, and physical security of buildings. Our report, *School Facilities: America's Schools Report Differing Conditions*, does not include flexibility of instructional space in its analysis of environmental factors; our report, *School Facilities: America's Schools Not Designed or Equipped for 21st Century*, does not include energy efficiency in its analysis of environmental factors.

of those using the school facilities. These codes vary widely by jurisdiction, but all schools are required to conform to such codes. The section on building features was the most logical place to include this information in the survey.

Environmental Factors

To rate the condition of environmental factors, respondents were asked to use a scale of very satisfactory, satisfactory, unsatisfactory, and very unsatisfactory. Responses of unsatisfactory and very unsatisfactory were reported as unsatisfactory. We also reported in this section the percent of schools in the state reporting air conditioning in classrooms.

Facilities Needs for Educational Reform

Some activities associated with educational reform have implications for the facilities in which they occur. For example, certain instructional programs or techniques may require that schools have space for small-group instruction. To rate how well school buildings met the functional requirements of specified activities related to educational reform, respondents were asked to use a scale of very well, moderately well, somewhat well, and not well at all. The data reported are for those rating "not well at all."

Technology

To rate the sufficiency of technology elements, respondents were asked to use a scale of very sufficient, moderately sufficient, somewhat sufficient, and not sufficient. The data reported are for those rating not sufficient. We also reported the average number of students per computer in the state.

Table I.1 references the survey question corresponding to each aforementioned item. The full text of each question appears in appendix II.

Table I.1: Survey Questions About Condition of Buildings, Building Features, Environmental Factors, Facility Needs for Educational Reform, and Technology

Item	Survey question number
Schools with at least one inadequate building of any type (original, addition, or temporary)	10
Schools with at least one inadequate building feature	16
Schools with at least one unsatisfactory environmental factor	20
Building features	16
Environmental factors	20
Percent of schools with air conditioning in classrooms	21
Facility needs for educational reform	19
Technology	17
Average number of students per computer	4 and 18

Federal Mandates

This section presents data obtained from our survey of school facilities and shows the percent of schools reporting needing to spend money on federal mandates in the last 3 and the next 3 years.

Money Reported Needed and Spent on Federal Mandates in the Last 3 Years

Data for the last 3 years are presented for the percent of schools indicating that money was spent on federal mandates (presented relative to the national average), those indicating that spending was not needed, and those indicating that no money was spent. The four categories in the table are mutually exclusive. We asked about spending in the last 3 years to grasp the amount being spent on these items within the context of actual budgets.

Money Estimated Needed for Federal Mandates in the Next 3 Years

The table for the next 3 years is similar to the table for the last 3 years described above, except that “no money spent” is replaced by a category labeled “unknown.” As noted above, the four categories shown are mutually exclusive. We asked these questions to grasp the amount of money needed to address these needs given what was already spent. We particularly phrased this question in terms of money needed rather than money “planned” to be spent, to grasp the magnitude of the need in this area without the constraints of budget realities.

Table I.2 references the survey question corresponding to each item. The full text of each question appears in appendix II.

Table I.2: Survey Questions About Federal Mandates

Item	Survey question number
Money reported needed and spent on federal mandates in the last 3 years	13
Money estimated needed for federal mandates in the next 3 years	14

A more detailed discussion of the technical choices made in the analysis of the data on federal mandates appears in appendix III.

GAO Reports Providing Further Information

More detailed information on each topic presented in the profiles, including sampling errors, appears in the reports shown in table I.3.

Table I.3: Guide to GAO Reports on School Facilities

Topic	GAO report
Overall condition of buildings	<u>School Facilities: Condition of America's Schools (GAO/HEHS-95-61, Feb. 1, 1995)</u>
Condition of building features	<u>and School Facilities: America's Schools Report Differing Conditions (GAO/HEHS-96-103, June 14, 1996)</u>
Estimated costs to bring schools into good overall condition	
Environmental conditions	<u>School Facilities: America's Schools Not Designed or Equipped for 21st Century (GAO/HEHS-95-95, Apr. 4, 1995); School Facilities: Condition of America's Schools (GAO/HEHS-95-61, Feb. 1, 1995); and School Facilities: America's Schools Report Differing Conditions (GAO/HEHS-96-103, June 14, 1996)</u>
Functional requirements for education reform	<u>School Facilities: America's Schools Not Designed or Equipped for 21st Century (GAO/HEHS-95-95, Apr. 4, 1995)</u>
Technology	
Federal mandates	<u>School Facilities: Condition of America's Schools (GAO/HEHS-95-61, Feb. 1, 1995); School Facilities: America's Schools Report Differing Conditions (GAO/HEHS-96-103, June 14, 1996); and School Facilities: Accessibility for the Disabled Still an Issue (GAO/HEHS-96-73, Dec. 29, 1995)</u>
State role in school facilities	<u>School Facilities: States' Financial and Technical Support Varies (GAO/HEHS-96-27, Nov. 28, 1995)</u>

All percentages in the profiles have been rounded to whole numbers and may differ from those in the original reports. For the same reason, percentages in the tables on federal mandates may not always add to 100 percent. Sampling errors associated with the data in the profiles are not shown but may be found in the original reports. A discussion of sampling errors appears in appendix III.

Questionnaire for Local Education Agencies

SCHOOL INFORMATION

1. NAME OF SCHOOL: *Please enter the name of the school shown on the attached label.*

2. If any of the following statements are true for this school, please circle the number of the appropriate answer. Circle ALL that apply.

This school teaches only postsecondary (beyond grade 12) or adult education students

1

This school is no longer in operation

2

This school is a private school, not a public school

3

This institution or organization is not a school

4

STOP! IF YOU MARKED ANY OF THE ABOVE STATEMENTS, PLEASE END HERE AND RETURN THIS QUESTIONNAIRE.

3. Which of the following grades did this school offer around the first of October, 1993? Circle ALL that apply.

Grade 1 1

Grade 2 2

Grade 3 3

Grade 4 4

Grade 5 5

Grade 6 6

Grade 7 7

Grade 8 8

Grade 9 9

Grade 10 10

Grade 11 11

Grade 12 12

Pre-kindergarten 13

Kindergarten 14

Ungraded (including ungraded special education students) 15

**Appendix II
Questionnaire for Local Education Agencies**

4. What was the total number of Full Time Equivalent (FTE) students enrolled in this school around the first of October, 1993?

_____ total FTE students

5. Does this school house any of its students in instructional facilities located off of its site, such as rented space in another school, church, etc? Circle one.

Yes 1

No 2 ----> GO TO
QUESTION 8

6. How many of this school's Full Time Equivalent (FTE) students are housed in off-site instructional facilities?

_____ FTE students housed off-site

7. How many total square feet of off-site instructional facilities does this school have? If exact measurements are not readily available, give your best estimate.

_____ total square feet off-site

8. How many original buildings, attached and/or detached permanent additions to the original buildings, and temporary buildings does this school have on-site? If this school does not have any permanent additions or any temporary buildings on-site, enter zero for these categories.

<u>On-Site Buildings</u>	<u>Number</u>
Original buildings	_____
Attached and/or detached permanent additions to original buildings	_____
Temporary buildings	_____

9. How many total square feet do the original buildings, the attached and/or detached permanent additions, and the temporary buildings have? If exact measurements are not readily available, give your best estimate. If this school does not have any permanent additions or any temporary buildings on-site, enter zero for these categories.

<u>On-Site Buildings</u>	<u>Total Square Feet</u>
Original buildings	_____
Attached and/or detached permanent additions to original buildings	_____
Temporary buildings	_____

**Appendix II
Questionnaire for Local Education Agencies**

10. What is the overall condition of the original buildings, the attached and/or detached permanent additions, and the temporary buildings? Refer to the rating scale shown below, and circle one for EACH category of building. If this school does not have any permanent additions or any temporary buildings on-site, circle "0."

Overall condition includes both physical condition and the ability of the buildings to meet the functional requirements of instructional programs.

Rating Scale

Excellent: new or easily restorable to "like new" condition; only minimal routine maintenance required.

Good: only routine maintenance or minor repair required.

Adequate: some preventive maintenance and/or corrective repair required.

Fair: fails to meet code and functional requirement in some cases; failure(s) are inconvenient; extensive corrective maintenance and repair required.

Poor: consistent substandard performance; failure(s) are disruptive and costly; fails most code and functional requirements; requires constant attention, renovation, or replacement. Major corrective repair or overhaul required.

Replace: Non-operational or significantly substandard performance. Replacement required.

<u>On-Site Buildings</u>	School does <u>not have</u>	<u>Excellent</u>	<u>Good</u>	<u>Adequate</u>	<u>Fair</u>	<u>Poor</u>	<u>Replace</u>
Original buildings	N/A.	1	2	3	4	5	6
Attached and/or detached permanent additions to original buildings	0.	1	2	3	4	5	6
Temporary buildings	0.	1	2	3	4	5	6

11. What would probably be the total cost of all repairs/renovations/modernizations required to put this school's on-site buildings in good overall condition? Give your best estimate. If this school's on-site buildings are already in good (or better) overall condition, enter zero.

\$ _____ .00

**Appendix II
Questionnaire for Local Education Agencies**

12. On which of the sources listed below is this estimate based? Circle ALL that apply.

Does not apply -- already in good (or better) overall condition 0

Sources

Facilities inspection(s)/assessments(s) performed within the
last three years by licensed professionals 1

Repair/renovation/modernization work already
being performed and/or contracted for 2

Capital improvement/facilities master plan or schedule 3

My best professional judgment 4

Opinions of other district administrators 5

Other (specify: _____) 6

13. During the last 3 years, how much money has been spent on the federal mandates listed below for this school's on-site buildings? Include money spent in 1993-1994. If exact amounts are not readily available, give your best estimate. Enter zero if none. Circle "1" if spending was not needed.

<u>Federal Mandates</u>	<u>Spending Not Needed</u>	<u>Amount Spent</u>
Accessibility for students with disabilities	1	\$_____00
Managing/correcting:		
Asbestos	1	\$_____00
Lead in water/paint	1	\$_____00
Underground storage tanks (USTs)	1	\$_____00
Radon	1	\$_____00
Other (specify _____)	1	\$_____00

Appendix II

Questionnaire for Local Education Agencies

14. How much money will probably need to be spent during the next 3 years on these federal mandates for this school's on-site buildings? If exact amounts are not readily available, give your best estimate. If spending will not be needed, circle "1." If unknown, circle "2."

<u>Federal Mandates</u>	<u>Spending Will Not Be Needed</u>	<u>Unknown</u>	<u>Amount Probably Needed</u>
Accessibility for students with disabilities	1 2		\$ _____ .00
Managing/correcting:			
Asbestos	1 2		\$ _____ .00
Lead in water/paint	1 2		\$ _____ .00
Underground storage tanks (USTs)	1 2		\$ _____ .00
Radon	1 2		\$ _____ .00
Other (specify: _____)	1 2		\$ _____ .00

15. Are these spending needs for federal mandates included in your answer to question 11?
Circle one for each mandate listed.

<u>Federal Mandates</u>	<u>Does not apply-- Not Needed/ Unknown</u>	<u>Yes Included</u>	<u>No-NOT Included</u>
Accessibility for students with disabilities	1	2	3
Managing/correcting:			
Asbestos	1	2	3
Lead in water/paint	1	2	3
Underground storage tanks (USTs)	1	2	3
Radon	1	2	3

**Appendix II
Questionnaire for Local Education Agencies**

16. Overall, what is the physical condition of each of the building features listed below for this school's *on-site* buildings? Refer to the rating scale shown below, and circle one for *EACH* building feature listed.

Rating Scale

Excellent: new or easily restorable to "like new" condition; only minimal routine maintenance required.

Good: only routine maintenance or minor repair required.

Adequate: some preventive maintenance and/or corrective repair required.

Fair: fails to meet code and functional requirement in some cases; failure(s) are inconvenient; extensive corrective maintenance and repair required.

Poor: consistent substandard performance; failure(s) are disruptive and costly; fails most code and functional requirements; requires constant attention, renovation, or replacement. Major corrective repair or overhaul required.

Replace: Non-operational or significantly substandard performance. Replacement required.

<u>Building Feature</u>	<u>Excellent</u>	<u>Good</u>	<u>Adequate</u>	<u>Fair</u>	<u>Poor</u>	<u>Replace</u>
Roofs	1	2	3	4	5	6
Framing, floors, foundations	1	2	3	4	5	6
Exterior walls, finishes, windows, doors	1	2	3	4	5	6
Interior finishes, trims	1	2	3	4	5	6
Plumbing	1	2	3	4	5	6
Heating, ventilation, air conditioning	1	2	3	4	5	6
Electrical power	1	2	3	4	5	6
Electrical lighting	1	2	3	4	5	6
Life safety codes	1	2	3	4	5	6

Appendix II
Questionnaire for Local Education Agencies

17. Do this school's *on-site* buildings have sufficient capability in each of the communications technology elements listed below to meet the functional requirements of modern educational technology? Circle one for EACH element listed.

<u>Technology Elements</u>	<u>Very Sufficient</u>	<u>Moderately Sufficient</u>	<u>Somewhat Sufficient</u>	<u>Not Sufficient</u>
Computers for instructional use	1	2	3	4
Computer printers for instructional use	1	2	3	4
Computer networks for instructional use	1	2	3	4
Modems	1	2	3	4
Telephone lines for modems	1	2	3	4
Telephones in instructional areas	1	2	3	4

Library/Media Center	1	2	3	4
Day care	1	2	3	4
Before/after school care	1	2	3	4

Appendix II
Questionnaire for Local Education Agencies

20. How satisfactory or unsatisfactory is each of the following environmental factors in this school's on-site buildings? Circle one for EACH factor listed.

<u>Environmental Factor</u>	<u>Very Satisfactory</u>	<u>Satisfactory</u>	<u>Unsatisfactory</u>	<u>Very Unsatisfactory</u>
Lighting	1	2	3	4
Heating	1	2	3	4
Ventilation	1	2	3	4
Indoor air quality	1	2	3	4
Acoustics for noise control	1	2	3	4
Flexibility of instructional space (e.g., expandability, convertability, adaptability)	1	2	3	4
Energy efficiency.	1	2	3	4
Physical security of buildings	1	2	3	4

21. Does this school have air conditioning in classrooms, administrative offices, and/or other areas? Circle ALL that apply.

- Yes, in classrooms 1
- Yes, in administrative offices 2
- Yes, in other areas 3
- No, no air conditioning in this school at all 4 --> GO TO QUESTION 23

22. How satisfactory or unsatisfactory is the air conditioning in classrooms, administrative offices, and/or other areas? *Circle one for EACH category listed.*

<u>Air Conditioning in:</u>	<u>Very Satisfactory</u>	<u>Satisfactory</u>	<u>Unsatisfactory</u>	<u>Very Unsatisfactory</u>
Classrooms	1	2	3	4
Administrative Offices	1	2	3	4
Other areas	1	2	3	4

23. Does this school participate in the National School Lunch Program? *Circle one.*

Yes 1

No 2

24. Regardless of whether this school participates in the National School Lunch Program, around the first of October, 1993, were any students in this school **ELIGIBLE** for the program? *Circle one.*

Yes 1

No 2----> GO TO QUESTION 27

Don't know 3----> GO TO QUESTION 27

25. Around the first of October, 1993, how many applicants in this school were approved for the National School Lunch Program? *Enter zero if none.*

_____ applicants approved

26. Around the first of October, 1993, how many students in this school received free or reduced lunches through the National School Lunch Program? *Enter zero if none.*

_____ recipients

27. How many students in this school were absent on the most recent school day? *If none were absent, please enter zero.*

_____ students absent

28. What type of school is this? *Circle one.*

REGULAR elementary or secondary 1

Elementary or secondary with SPECIAL PROGRAM EMPHASIS--
for example, science/math school, performing arts high school,
talented gifted school, foreign language immersion school, etc 2

SPECIAL EDUCATION--primarily serves students with disabilities 3

VOCATIONAL/TECHNICAL--primarily serves students being
trained for occupations 4

ALTERNATIVE--offers a curriculum designed to provide alternative
or nontraditional education; does not specifically fall into the
categories of regular, special education, or vocational school 5

29. Does this school offer a magnet program? *Circle one.*

Yes 1

No 2

Technical Appendix

Scope and Methodology Overview

We obtained the information presented in this report primarily through two data collection efforts. The first of these was our survey of school building conditions conducted in 1994. This survey was sent to a nationally representative sample of about 10,000 schools and included questions on the physical condition of buildings, the estimated cost to make needed repairs, the extent to which schools were able to meet facility requirements of education reform, and whether schools had sufficient technology capability. In addition to the school survey, in 1995 we conducted telephone interviews with SEA officials in all 50 states to gather information on state-level involvement in school facilities. These interviews focused on the amount and type of financial assistance states provided to LEAS, the technical assistance and compliance activities they performed, and the data they collected on the condition of facilities.

This appendix describes the methodology used in the school survey, including considerations made in the analysis of the data from this technically complex study. It also describes the methodology used to interview SEA officials.

National Survey of School Facilities

To determine the physical condition of America's 80,000 schools, including the extent to which they have the capacity to support 21st century technology and education reform for all students, we surveyed a national sample of public schools and their associated districts and augmented the surveys with visits to selected schools districts. We consulted with various experts on the design and analysis of this project.⁹

We sent surveys to a nationally representative sample of about 10,000 public schools in over 5,000 associated school districts. For our sample, we used the public school sample for the Department of Education's 1993-94 Schools and Staffing Survey (SASS), which is a multifaceted, nationally representative survey sponsored by NCES and administered by the Bureau of the Census.

We asked about (1) the physical condition of buildings and major building features, such as roofs, framing, floors, and foundations; (2) the status of environmental conditions, such as lighting, heating, and ventilation; (3) how well schools could meet selected functional requirements of education reforms, such as having space for small- and large-group instruction; (4) the sufficiency of data, voice, and video technologies and

⁹See School Facilities: Condition of America's Schools (GAO/HEHS-96-61, Feb. 1, 1995), app. III, for a full list.

the infrastructure to support these technologies; (5) the amount of money schools spent in the last 3 years or planned to spend in the next 3 years on selected federal mandates; and (6) an estimate of the total cost of needed repairs, renovations, and modernizations to put all buildings in good overall condition. (See app. II for a copy of the survey.)

We directed the survey to those officials who are most knowledgeable about facilities—such as facilities directors and other central office administrators of the districts that housed our sampled schools. Our analyses are based on responses from 78 percent of the schools sampled. Analyses of nonrespondent characteristics showed them to be similar to respondents. Findings from the survey have been statistically adjusted (weighted) to produce estimates that are representative at national and state levels. All data are self-reported, and we did not independently verify their accuracy. We administered the survey between May and October 1994 in accordance with generally accepted government auditing standards.

Survey Participants

For our review of the physical condition of America's schools, we wanted to determine physical condition and spending as perceived by the most knowledgeable school district personnel. To accomplish this, we mailed questionnaires to superintendents of school districts associated with a nationally representative sample of public schools. We asked the superintendents to have district personnel, such as facilities directors who were very familiar with school facilities, answer the questionnaires. The questionnaires gathered information about a variety of school facility issues, including spending associated with federal mandates. For our school sample, we used the sample for the 1993-94 SASS.

Sampling Strategy

The 1993-94 SASS sample is designed to give several types of estimates, including both national and state-level estimates. It is necessarily a very complex sample. Essentially, however, it is stratified by state and grade level (elementary, secondary, and combined). It also has separate strata for schools with large Native American populations and for Bureau of Indian Affairs schools. A detailed description of the sample and discussion of the sampling issues are contained in NCES' technical report on the 1993-94 SASS sample.¹⁰

¹⁰Robert Abramson and others, 1993-94 Schools and Staffing Survey: Sample Design and Estimation, NCES.

Survey Response

We mailed our questionnaires to 9,956 sampled schools in 5,459 associated districts across the country in May 1994. We did a follow-up mailing in July 1994 and again in October 1994. After each mailing, we telephoned nonresponding districts to encourage their responses. We accepted returned questionnaires through early January 1995.

Of the 9,956 schools in the original sample, 393 were found to be ineligible for our survey.¹¹ Subtracting these ineligible schools from our original sample yielded an adjusted sample of 9,563 schools. The number of completed, usable school questionnaires returned was 7,478. Dividing the number of completed, usable returns by the adjusted sample yielded a school response rate of 78 percent.

We compared nonrespondents with respondents by urbanicity, location, state, race and ethnicity, and poverty and found few notable differences between the two groups. On the basis of this information, we assumed that our respondents did not differ significantly from the nonrespondents.¹² Therefore, we weighted the respondent data to adjust for nonresponse and yield representative national estimates.

Analytic Decisions on Spending Data

The analyses of school spending on facilities in this report are based on data from three survey questions: 11, 13, and 14 (see app. II). The dollar amounts reported by schools for each of these questions varied greatly. Table III.1, for example, shows the extreme variation in the amounts schools reported needing to repair or upgrade schools to good overall condition (survey question 11), by school level.

¹¹Reasons for ineligibility included school was no longer in operation, entity was not a school, entity was a private rather than public school, and entity was a postsecondary school only.

¹²Detailed sample and response information for each sample stratum is available upon request from GAO. See appendix LV for appropriate staff contacts.

Table III.1: Frequency Distribution of Amounts Reported Needed to Repair or Upgrade Schools to Good Overall Condition

Amount reported needed	Elementary schools	Secondary schools	Combined	Total (percent) ^a
\$0	9,290	3,056	597	12,943 (16)
\$1 to less than \$100	22			22 (0)
\$100 to less than \$1,000	643	213	24	879 (1)
\$1,000 to less than \$100,000	10,179	3,276	500	13,955 (18)
\$100,000 to less than \$1 million	18,882	5,477	952	25,311 (32)
\$1 million to less than \$6 million	15,760	6,048	689	22,497 (28)
\$6 million to less than \$15 million	1,394	1,379	92	2,865 (4)
\$15 million to less than \$50 million	312	588	42	943 (1)
\$50 million to less than \$100 million		12	4	16 (0)
\$100 million or more	19	5		23 (0)
Total (percent) ^a	56,500 (71)	20,053 (25)	2,900 (4)	79,454 (100)

^aSlight discrepancies in row and column totals are due to rounding.

Except in one case, our examination of those cases reporting extreme amounts did not produce convincing evidence that the information reported was inaccurate. For example, in the case of the amounts needed to repair or upgrade schools to good overall condition, the average school construction cost in 1994 was \$6 million for an elementary school and \$15 million for a high school. However, our site visits revealed one new school that cost more than \$151 million to build. We also know that, in some cases, costs of repair can be greater than cost of replacement. For these reasons, we did not exclude as outliers any reported amounts, except as discussed below.

Our initial analyses published in our first report on school facilities produced estimates at a national level. Upon examining the data for reporting state-level estimates, we found an amount reported in one state appeared to be out of range for a realistic estimate of the specific item in question. Because sample surveys use weights to produce population estimates and this particular respondent carried a large weight, this extreme amount greatly affected survey results for this item. Therefore, we adjusted this response to equal the median of the amounts reported for this item by other respondents in the same state. Unless otherwise noted,

national averages in this report that involve this item in the computation use this adjusted amount.

Sampling Errors

All sample surveys are subject to sampling error, that is, the extent to which the results differ from what would be obtained if the whole population had received the questionnaire. Since the whole population does not receive the questionnaire in a sample survey, the true size of the sampling error cannot be known. It can be estimated, however, from the responses to the survey. The estimate of sampling error depends largely on the number of respondents and the amount of variability in the data.

Variability in the data was particularly relevant to analyses of school spending on facilities. The wide range of dollar amounts reported reduced the precision with which we could produce dollar estimates. For this reason, reported amounts needed to repair or upgrade schools to good overall condition are limited to the range of actual dollar amounts reported in the sample and do not include state-level estimates. For similar reasons, estimates on spending for federal mandates are limited to the national average and median dollar amounts spent and needed per school and the percent of schools in each state spending or needing to spend above and below the national average.

Nonsampling Errors

In addition to sampling errors, surveys are also subject to other types of systematic error or bias that can affect results. This is especially true when respondents are asked to answer questions of a sensitive nature or that are inherently subject to error. Lack of understanding of these issues can also result in systematic error. Bias can affect both response rates and the way respondents answer particular questions. It is not possible to assess the magnitude of the effect of bias, if any, on survey results. Rather, possibilities of bias can only be identified and accounted for when interpreting results. This survey had three major possible sources of bias: (1) bias inherent in all self-ratings or self-reports (2) bias due to the complexity of this particular subject matter, and (3) sensitivity of compliance issues.

Bias inherent in self-rating may impact survey results because the integrity of the data depends upon respondents' providing honest and accurate answers to survey questions. The results of this report are affected by the extent to which respondents accurately reported expenditures and the extent to which they provided accurate estimates for projected spending.

When, as in this case, responses are not verified, the possibility of this kind of bias always exists.¹³

Such bias may impact the survey results concerning technology in three ways. First, the self-ratings or self-reports of technological sufficiency may be overly optimistic for several reasons. In our analyses, we included as “sufficient” responses that indicated moderate and somewhat sufficient capability as well as very sufficient capability. This could indicate a wide range of sufficiency, including some responses that are very close to “not sufficient.” In addition, our analyses showed that without any objective standards with which to anchor their responses, schools indicating “sufficient” computers had computer/student ratios from 1:1 to 1:292 (a median of 1:11) for those schools that had computers. About 300 schools that indicated they had no computers for instructional use said that was sufficient. Finally, technology experts who regularly consult with school systems report that the level of knowledge among school administrators and staff of possible use and application of technology in schools is low—further increasing the likelihood that these sufficiency estimates are overly optimistic.

Second, assessing the physical condition of buildings is also a very complex and technical undertaking. Moreover, many facilities problems, particularly the most serious and dangerous, are not visible to the naked eye. Further, any dollar estimates made of the cost to repair, retrofit, upgrade, or renovate are just that—estimates—unless the school has recently completed such work. The only way school officials actually know what such work costs is to put it out for bid. Even then, cost changes may occur before the contracted work is completed. Therefore, estimates and evaluations reported are subject to inaccuracies.

A third kind of bias that may occur results from the sensitivity of compliance issues. Our interest in securing information on compliance with federal mandates put us in a highly sensitive area. For example, respondents may have perceived that accurately reporting problems in providing access for disabled students would make the school vulnerable to lawsuits, despite assurances of confidentiality. Consequently, in such sensitive areas, schools may have tended toward underreporting or made conservative estimates.

¹³Respondents’ misunderstanding of certain legal requirements also may occur. For example, in a study of implementation of the Americans With Disabilities Act (ADA), we found that 28 to 35 percent of the barrier removal efforts to comply with legal requirements planned by owners and managers of establishments covered by ADA were not necessary. See *Americans With Disabilities Act: Effects of the Law on Access to Goods and Services* (GAO/PEMD-94-14, June 21, 1994).

Interviews With State Officials Responsible for School Facilities

To determine the extent to which states provided funding and technical assistance and compliance review for school facilities and maintained information on the condition of school buildings, we conducted telephone interviews with state officials responsible for school facilities in all 50 states. In nearly all cases, we spoke with SEA staff responsible for school facilities. In a few states, we also spoke with officials in other state agencies extensively involved in school facilities. We supplemented this information with supporting documentation provided by state officials. We conducted this study from October 1994 to September 1995 in accordance with generally accepted government auditing standards. All data were self-reported by state officials. We did not independently verify this information, although, where necessary for clarification, we conducted follow-up telephone interviews. The focus of our study was state fiscal year 1994. Typically, this covered the period from July 1, 1993, to June 30, 1994.

--	-------------------------

State's Role in Facilities

Financial Assistance

Through 1994, Alabama provided facilities funding through two broad appropriations categories. One was the state's basic education support program, called the Minimum Program Fund, which gave LEAs \$55 per "earned teacher unit" for capital projects. The other, called the Local Boards Program, gave LEAs aid for facilities maintenance also on an earned teacher unit basis. In addition, the state also issues bonds for school construction from time to time as needs are identified. In 1985, Alabama issued \$130 million worth of bonds for K-12 school improvements; a similar bond issue was approved for sale in 1996.

This funding approach, however, is affected by recent court decisions that found the state's school finance system unconstitutional because the flat rate for distributing funds did not consider local ability to raise revenues. Plaintiffs and defendants have agreed to suspend the Minimum Program Fund and Local Boards Program temporarily and provide all state aid for 1995 as block grants while the legislature develops a plan to eliminate inequities among LEAs.

Technical Assistance

The Department of Education has two units that provide technical help. The Plans and Surveys Unit helps LEAs assess building needs through such means as pupil locator maps, which are used to determine school sites, consolidation needs, grade regrouping, and transportation routes. The School Architect Unit reviews and approves proposed drawings and specifications to ensure their compliance with state standards and their educational adequacy. Unit staff also process architectural and construction contracts, monitor construction, and attend final inspections of completed facilities.

Facilities Information

The Department maintains a building inventory, called the Site and Facility Enumeration, which is updated annually. LEAs are responsible for completing the survey, which includes such items as the construction date, gross area, type of construction, roof type, primary heat source, and accessibility. The survey also requires the LEA to rate the overall condition of the building on a four-point scale from "excellent" to "should be razed."

State's Role in Facilities

Financial Assistance	<p>Alaska has two main financial assistance programs; one provides for debt service and the other provides direct grants for capital projects. The debt service program, in existence since 1970, reimburses cities and boroughs at a set percentage of their debt service payments until the bonds are retired. The legislature annually makes the final decision on whether the bond program will be fully funded. The percentage of eligible reimbursement varies from 70 to 100 percent and is currently up to 70 percent for new bonds. The capital projects program provides grants for specific construction projects. Beginning in 1994, LEAs must contribute 2 to 35 percent of the cost, depending on their ability to pay. To obtain funding under either program, LEAs submit project applications, which are ranked by the Department of Education on a specified set of criteria and are funded on a priority basis. The legislature also awards some discretionary grants directly to LEAs for facilities projects.</p> <p>Some school districts in the state are located in areas without local governments that collect taxes. Because of this, these districts cannot issue bonds. Consequently, school construction is funded either by the capital projects grant program or by special appropriation.</p>
Technical Assistance	<p>Department staff provide limited technical assistance to LEAs. They review construction plans and design documents for conformance with education specifications but not for compliance with building or fire codes. Their assistance is primarily in helping LEAs with grant applications and state-required facility plans and providing training on new regulations or programs as needed.</p>
Facilities Information	<p>The Department keeps copies of LEA-prepared facility plans, which are required every 6 years under state law. Department staff are also gathering data to develop (1) a comprehensive building record inventory, which would include items such as site acreage, building description, square footage, and primary systems used in the building; (2) an educational adequacy survey to measure how well the structure of a facility meets curricular requirements; and (3) a building condition survey to assess the physical adequacy of facilities.</p>

State's Role in Facilities	
Financial Assistance	Arizona has two programs that provide state funding for capital purchases; including school facilities, each of them part of the state's foundation funding program. Each LEA receives this state funding as a block grant, with the amount of funding for capital projects based on a per-pupil rate that varies inversely with the assessed valuation per pupil. Under one of the two programs, the LEA can decide whether to apply the funding to capital purchases or to operations. The state does not monitor how much LEAs spend on facilities, but officials estimate that about 30 percent is spent on capital projects. Under the second program, the LEA is required to use the funding for facilities, equipment, buses, or other capital purchases.
Technical Assistance	State officials reported they do not provide technical assistance or perform compliance reviews related to facilities.
Facilities Information	The state legislature recently authorized a statewide school facilities inventory and needs assessment. The study, published in 1995, collected facilities condition information from each LEA using both questionnaires and site visits.

State's Role in Facilities

Financial Assistance

Arkansas currently has three facility funding programs. The first was recently approved by the state legislature and covers three types of financial aid. Funding for repair, renovation, buses, and other capital items is available to all districts that meet the state's minimum millage requirement, submit a facility needs assessment, and meet financial need requirements. Funding for construction and site acquisition is available based on enrollment growth, and funding for debt service is available to LEAs with bonded construction debt. The second program, a revolving loan fund begun in 1951, is for a variety of capital expenses. It provides up to \$500,000 per year, with the maximum amount for any LEA based on the number of students. Loans are for 8 years; rates are set by the State Board of Education and are usually 1 to 1.5 percent above current bond interest. When loan requests outstrip the amount in the revolving fund (currently \$22 million), the state sells some of the loans to banks. The loan fund covers its own operating expenses. A third program, which funded energy conservation and was funded from a court settlement related to oil company overcharges, will end in 1996.

Technical Assistance

The Department of Education provides information to LEAs on facilities regulations, compliance with the Americans With Disabilities Act, and hazardous materials. At LEA request, the Department provides assistance with facilities planning. It also reviews school construction plans for compliance with state requirements for space and seismic design standards in new construction.

Facilities Information

The Department conducted a one-time facilities inventory in 1986 using self-reported data from LEAs. Information included numbers of buildings and rooms, acreage, original construction dates, dates of additions, condition of buildings, and fire protection information for insurance. The Department plans to conduct a statewide facility needs assessment in 1996.

State's Role in Facilities

Financial Assistance

California has three main financial assistance programs for school construction--the Lease-Purchase programs for Growth/New Construction, Modernization, and Reconstruction--which award funding on a per project basis. They have been funded mainly through state bonds, with priority going to proposals submitted by LEAs willing to contribute half of the project cost and to LEAs with a substantial portion of their enrollment in multitrack year-round schools. (In their proposals, LEAs can opt to contribute half the project cost or contribute nothing.) The state also has separate programs that (1) provide dollar-for-dollar matches of amounts LEAs deposit in deferred maintenance funds, (2) help buy and install portable classrooms for LEAs impacted by emergencies or excessive growth, (3) help pay for asbestos abatement, and (4) help pay for air conditioning and insulation. Most of these programs received no funding in 1994, because voters defeated a \$1 billion bond proposal. The only funding provided was \$52 million for the deferred maintenance program, which does not depend on state bond sales. In March 1996, voters approved \$3 billion for elementary, secondary, and postsecondary facilities.

Technical Assistance

Several state agencies share responsibility for school facilities. Department of Education staff review proposed school sites and building plans for educational adequacy and safety, develop building and site selection standards, and help LEAs with project applications and facilities planning. The Office of Regulation Services within the Division of the State Architect, under the Department of General Services, reviews all building plans for compliance with pertinent building codes and laws on handicapped access, fire suppression, and structural safety. It also supervises the inspection process, meets with architects and engineers to resolve questions of code interpretation, and develops regulations on structural safety and accessibility. The State Allocation Board (SAB) allocates funds for construction, modernization, and deferred maintenance projects. The Office of Public School Construction, within the Department of General Services, staffs the SAB, administers construction funds, and helps LEAs with application documentation and SAB policy.

Facilities Information

The Division of the State Architect maintains records of building projects dating back to the 1930s but does not have an inventory of all school buildings. The state does not conduct any formal data collection on the condition of schools.

State's Role in Facilities

Financial Assistance	In Colorado, state school construction funding is part of the state's equalized basic aid support program. LEAs are required to set aside at least \$202 (but no more than \$800) per pupil of their basic aid funding for facilities construction and major maintenance and insurance and risk management reserves. Basic aid is typically a combination of state and LEA funding. The state portion of basic aid, and therefore of the facilities component, varies among the LEAs on the basis of their property valuation per student.
Technical Assistance	State officials reported they do not provide technical assistance or perform compliance reviews related to facilities.
Facilities Information	State officials reported they collect limited or no information on facilities.

State's Role in Facilities

Financial Assistance

Connecticut provides facilities financial assistance through two programs. LEAs may use the funds for direct costs or debt service, and the source of the funding is sale of state bonds. The first program provides grants for construction, renovation, roof replacements, and energy efficiency projects costing at least \$10,000. All LEAs are eligible and receive from 20 to 80 percent of project costs on the basis of a formula that considers local wealth and real estate valuation as well as the project's square footage and projected enrollment. A second program funds regional projects such as special education, vocational agriculture, and interdistrict magnet schools. These projects are eligible for higher state funding rates--in some cases up to 100 percent. The Department of Education prepares prioritized lists of approved projects, which are subsequently reviewed and approved by the governor and state legislature. Projects are prioritized in three categories: those designed to meet mandated educational programs, those to enhance them, and those that address nonprogram needs such as roof replacements, space for support services, or energy conservation improvements. Projects to correct building or fire code violations are also eligible for state reimbursement of from 20 to 80 percent but are approved directly by the Department and do not require legislative approval.

Technical Assistance

School Facilities Unit staff review and approve architectural plans for compliance with building, health, and fire codes as well as for federal safety and accessibility standards.

Facilities Information

The Department limits its information collection to the records, forms, and documentation associated with the projects under review at any given time. General information on facilities condition is not collected.

--	--------------------------

State's Role in Facilities

Financial Assistance

Delaware provides funding for school facilities through three programs. One program provides funding to LEAs for major capital improvements projects costing more than \$175,000. The program requires LEAs to contribute 20 to 40 percent of project costs, depending on ability to pay. The second program, which is for scheduled maintenance and repairs, provides each LEA with a portion of available funding based on the size of the LEA's enrollment. LEAs must match the state's allocation at 40 percent to participate. The third program is the annual maintenance program, which provides funding to LEAs for unscheduled repairs using a flat-rate formula that considers building age and enrollment.

Technical Assistance

The Department of Public Instruction provides information to LEAs on program procedures and requirements and offers guidance on interpreting rules and regulations. It also provides assistance with planning upon LEA request, and, from time to time, it provides training on topics such as minimizing costs. The Department performs minimal compliance duties; architectural plans are reviewed at the local level for compliance with building codes and other requirements.

Facilities Information

The Department is developing a computerized inventory of floor and site plans. It also reviews LEA lists of planned projects but does not collect information on the condition of facilities.

State's Role in Facilities

Financial Assistance

Florida has eight financial assistance programs, all funded from a gross receipts tax on utilities and motor vehicle licensing revenue. Two programs allocate funds to LEAs on the basis of district enrollment growth relative to statewide growth and are restricted to projects identified in LEA 5-year facility plans. A third provides maintenance funding based on square footage, age, and replacement costs of buildings. The other programs provide funds for specific projects such as joint-use facilities. The state also has one program that targets project funding to LEAs with limited ability to raise local revenues.

Technical Assistance

In fiscal year 1996, the Department of Education's school facilities staff was cut from 72 full-time-equivalent positions to 28. Before these changes, the Department was highly involved in facility planning, design, construction, and safety; all responsibility for these areas has since been given to the district school boards. Department staff are acting as consultants when asked and continue to provide some technical assistance to LEAs. The Department also continues to implement the state's training and certification program for building code inspectors of educational facilities. It is also responsible for developing facility regulations, although many of these will now be considered guidelines rather than requirements. Regarding compliance activities, the Department provides building plan review for LEAs that cannot afford to pay for these services. Previously, the Department reviewed nearly all plans for building code compliance and conducted on-site structural inspections of new construction. Other activities formerly done by the Department include conducting facilities-related research, performing postoccupancy reviews, and administering a product evaluation program.

Facilities Information

Florida collects facilities information through two programs. The Florida Inventory of School Houses is a computerized, annually updated inventory with detailed information on sites, buildings, and rooms, including a condition rating (satisfactory or unsatisfactory) for each room and facility assigned by state inspectors. Its square footage data are used to allocate state-provided maintenance money, and its ratings determine eligibility for state funding (buildings rated unsatisfactory are not eligible for state aid, except to correct life/safety problems). The second program is a requirement that LEAs submit an educational plant survey at least once every 5 years. The survey includes a proposed building plan and data on existing facilities, programs, and projected enrollment growth. The survey dictates what projects can be undertaken as state aid is generally restricted to survey recommended projects.

State's Role in Facilities	
Financial Assistance	Georgia provides construction aid to LEAs through a system of annual entitlements, which are computed on the basis of a district's demonstrated need relative to total needs statewide. LEAs may let entitlements accrue and request funding for specific projects as needs arise, allowing them to undertake significant projects rather than make minor repairs year after year. They can also obtain advances on future entitlements. State law requires LEAs to submit a 5-year comprehensive facilities plan and contribute 10 to 25 percent of project costs, with the percentage dependent on ability to pay. Georgia recently established a second entitlement program to help LEAs experiencing exceptional growth. In this program, LEAs earn entitlements on the basis of their increase in enrollment relative to the total increase in enrollment statewide.
Technical Assistance	Staff in the Department of Education's Facilities Services Section, recently reduced by one-third as part of a general downsizing of the Department, provide a number of technical assistance services to LEAs. Field consultants are assigned to LEAs and assist district staff develop long-range plans, conduct organizational studies, and move through the application process. Department staff provide training to LEA staff and others on such topics as program planning, facilities standards, architect selection, and building code changes. The Department's architect staff review all project plans for compliance with state education program facility standards and building codes and serve as an information center for hazardous materials.
Facilities Information	All LEAs must prepare a local facilities plan at least once every 5 years. The plan is based upon defined education program needs and includes an architect's assessment of building conditions and details about improvements and new construction needed, including cost estimates. The plan also includes an annually updated facilities inventory. To qualify for state funding, facility plans must be validated by an outside survey team and approved by the Department of Education.

State's Role in Facilities

Financial Assistance	Because Hawaii has a single school system with no independent local districts, school construction is entirely state funded. The major funding source is the State Educational Facilities Improvement Special Fund, created in 1989 to provide \$90 million per year for 10 years. The Department of Education prioritizes projects for this program and submits them for approval by the legislature. The legislature also has discretion to appropriate other moneys for specific projects.
Technical Assistance	The school construction process involves several other agencies besides the Department of Education. The Department initiates the project request, contributes to preliminary design from an educational perspective, and obtains approval for any variances from educational specifications. Actual design, engineering, bidding, contracting, and inspection of projects is handled by the Department of Accounting and General Services, which has responsibility for all state-owned buildings. This agency also reviews the plans to ensure their compliance with building codes. The Department of Budget and Finance approves the advertisement for bid, ensures that all needed permits have been obtained, reviews allotment requests, and releases funds.
Facilities Information	The Department of Education maintains an annually updated inventory of school buildings and other facilities. This inventory includes information on construction type, designed and actual use, square footage, and air conditioning. The Department also collects information on the condition of schools through an annual school inspection program that uses teams of staff, administrators, students, parents, community members, and/or legislators to assess buildings and grounds from a user perspective. These teams evaluate several building aspects, including interiors and exteriors, grounds, furniture, health and safety, and sanitation, using standards developed by the Department of Education and the Department of Accounting and General Services. In addition to these efforts, the Department of Accounting and General Services and the Department of Education conduct annual school inspections to identify needed major repair and maintenance projects.

State's Role in Facilities

Financial Assistance

Idaho has two programs that provide funding for facility improvement. The first, funded with state lottery revenues, is distributed to LEAs on the basis of attendance and may be used for construction, renovation, major maintenance, and school buses. The second program, funded through appropriations, is for technology. Funds from this program, which can be used for both facilities and equipment, are distributed to LEAs on the basis of attendance and through competitive grants. Grant proposals are ranked by a private contractor, and projects are fully funded in rank order until the appropriation is depleted.

Technical Assistance

Department of Education staff provide information and training to LEAs on facilities regulations and processes and on architectural matters. They review architectural plans for all school facilities projects (including those that do not receive state funding) to ensure that the state's education specifications are met.

Facilities Information

In 1992, in response to a legislative mandate, Idaho published a one-time, statewide study of the condition of school facilities that included data on construction, renovation, replacement, and technology needs. An independent contractor made on-site inspections to gather information for the study.

State's Role in Facilities

Financial Assistance	Illinois does not currently provide state funding for school construction and renovation. From 1973 to 1980, the state provided a portion of the cost of school facilities projects. The state share ranged from 30 to 80 percent and was based in part on assessed valuation per pupil.
Technical Assistance	The Department of Education provides facilities-related information to LEAs, but its main facilities-related activity involves approving LEA requests to raise levies up to 5 mills, without a popular vote, to correct school facility life/safety problems. The Department's architects review the problems and the accuracy of the LEAs' cost estimates to correct them.
Facilities Information	In the early 1990s, the Department conducted a school facilities inventory that included information on asbestos, accessibility, and life safety hazards.

	\$1,800 to \$75,155,500

State's Role in Facilities	
Financial Assistance	Indiana has three programs that provide funds for school facilities. One program provides LEAs with an annual grant of \$40 per pupil to service bonded debt incurred for capital projects. The other two programs use revolving funds to provide loans to LEAs for direct costs of school construction and major maintenance. The first of these funds originated when Indiana gained statehood and currently provides loans of up to \$15 million to LEAs ranking in the lowest 40 percent in assessed valuation per pupil. Seventy-five percent of the revolving fund must be loaned for capital improvement projects and 25 percent for technical infrastructure or equipment. The second program targets LEAs that need additional classrooms because of higher-than-average student-to-classroom ratios or because of damage from such things as fires or natural disasters. LEAs may borrow \$4,000 per pupil (up to \$250,000 per school) at 1 percent interest. The original source of this fund was unclaimed state bonus checks awarded to soldiers who served in World War II and the Korean War.
Technical Assistance	Department of Education staff provide information on facilities guidelines and advise LEA officials on planning, financing, and construction of facilities projects.
Facilities Information	The Department recently completed a statewide facilities inventory containing data on the age, size, type of heating system, and presence of alarm system for each building. Information was self-reported by the LEAs using a written survey and did not include information on facilities condition. Department staff will update this information as LEAs submit construction and renovation project plans.

State's Role in Facilities

Financial Assistance	In Kansas, all unified school districts that pass bond measures for school construction or major maintenance are eligible to receive state funding for debt service. The funding is a demand transfer, similar to an entitlement program. The amount received is determined using a formula based on the school district's ability to pay. Under this formula, wealthier districts receive little or no funding from the program.
Technical Assistance	The Department of Education reviews architectural plans for compliance with fire and safety codes and the Americans With Disabilities Act, and it responds to facilities-related questions from LEAs.
Facilities Information	In 1991-92, the Department conducted a one-time inventory of all schools in the state. The information included the number, age, location, and use of facilities. They do not collect information on the condition of facilities.

Reported range of amounts needed to upgrade or repair a school to good overall condition	\$500 to \$200,000,000

State's Role in Facilities

Financial Assistance

Kentucky provides construction funding to LEAs through three programs. The first requires participating LEAs to levy at least \$.05 per \$100 of property assessment for school facilities, which the state equalizes at 150 percent of the statewide average per pupil assessment. The second program, which is part of the state's basic foundation funding, provides each LEA with a capital outlay allotment of \$100 per student. Under the third program, the School Facilities Construction Commission appropriates available funding to LEAs on the basis of their proportion of all unmet facility needs in the state.

Technical Assistance

The Department of Education assists LEAs through all phases of the construction process including facility planning, site selection, budgeting, and construction. It provides help in such areas as architect selection, bidding costs, property disposal, hazardous materials, and construction finance. Department staff also consult on architectural, legal, and engineering issues and provide training to local committees responsible for developing facility plans. They also review architectural plans for conformance with education specifications and ensure that plans are submitted to the Department of Housing and Building Construction for compliance with various building and life/safety codes. Additional compliance responsibilities include verifying proposed facility plans, inspecting proposed sites and completed construction, and reviewing such matters as project budget scopes, property leases, and construction management contracts.

Facilities Information

Kentucky maintains a statewide building inventory that provides detailed information on building systems and construction materials as well as the building age and use. The state also requires that each LEA prepare a facility plan once every 4 years. The plans include a standard assessment of building condition, completed by a registered architect or certified engineer, that covers several aspects of the site, exterior building features, and interior conditions.

State's Role in Facilities	
Financial Assistance	Louisiana does not provide funding for facilities construction. Districts may use state foundation funding to pay for routine maintenance and repairs but are not required to do so.
Technical Assistance	Department of Education staff are not involved in providing technical assistance or in any compliance review activities other than ensuring that the State Fire Marshal has made a site visit to new buildings.
Facilities Information	Currently, the Department collects no information on school facilities. Recent legislation required the development of a facilities database, but it is not clear when implementation will begin.

State's Role in Facilities

Financial Assistance	As part of the state's foundation funding, Maine provides LEAs with funding to pay debt service on capital construction bonds. The amount LEAs receive is based in part on assessed valuation per student and project priority criteria such as overcrowding. Funding may be used for new schools, additions, land costs, and complete renovations.
Technical Assistance	Throughout the funding and construction processes, the Department of Education provides information and assistance on regulations and requirements. The Department advises LEAs on complying with state education program guidelines, and it coordinates project review and approval with such other agencies as the State Fire Marshal and the Bureau of General Services.
Facilities Information	The Department has not gathered information about the condition of school facilities but plans to gather inventory information in fiscal year 1997.

State's Role in Facilities

Financial Assistance

Since 1971, Maryland's Public School Construction Program has provided funding for new construction, renovation, and additions ranging from 50 to 80 percent of eligible costs based, in part, on LEA ability to pay. The program is administered by an interagency committee that consists of the State Superintendent of Schools, the Secretary of the Department of General Services, and the Director of the Office of Planning. All three agencies provide staff for the program on a part-time basis. The facilities funding process begins in December each year, when all LEAs submit to the interagency committee their proposed annual capital improvement program, along with an updated 5-year capital plan. The committee, in consultation with local board staff, approves, modifies, or defers each LEA proposal. The committee then submits a statewide capital improvement program to the State Board of Public Works, made up of the Governor, Comptroller, and Treasurer, who hold public hearings. The final authorization for project funding is made by the State General Assembly. Also, under the School Construction Program, the state assumed debt service payments for LEA construction bonds issued up to June 30, 1967. Finally, the program maintains a fleet of relocatable buildings--the equivalent of over 200 classrooms--for use by LEAs based on need and availability.

Technical Assistance

The SEA School Facilities Branch reviews and approves, at various stages, school construction projects that do not receive state funding and cost more than \$359,000. Branch staff serve on local planning committees, provide technical assistance, develop and distribute facility guidelines, conduct workshops for local board staff, and collect data on energy use for all public elementary and secondary schools.

Facilities Information

The School Construction Program maintains inventory information on all public schools as well as LEA Facility Master Plans that contain condition information and are required to be updated annually. Additionally, the Program maintains records of the 100 school maintenance inspections conducted annually by the Department of General Services. They also maintain LEA annual comprehensive maintenance plans and annual maintenance expenditure reports.

State's Role in Facilities

Financial Assistance

Massachusetts has provided facilities-related financial aid to LEAs since 1948. The assistance comes primarily in the form of debt service on projects for construction, renovation, and heating and ventilation, or major maintenance for life/safety, accessibility, or energy conservation. To be eligible for consideration, projects must cost more than \$100,000. The program will repay 50 to 90 percent of the debt service, the percentage dependent on such factors as the LEA's income wealth and per pupil real estate valuation. Projects financed without bonds (and therefore having no debt service) receive a similarly determined percentage of total costs. Approved projects are placed on one of two annually developed priority lists. One list targets reductions of minority isolation in urban areas; the other targets overcrowding. All projects on the lists are funded before addressing the needs identified on the next year's list. Funding for the program comes from annual appropriations.

Technical Assistance

Technical assistance provided by the Department of Education begins with the Department staff holding a building needs conference for each LEA project that applies for state funding. Department staff advise LEAs on eligibility, size and space needs, and the appropriateness of the proposed site. Staff visit each funded project at least three times--before, during, and after construction.

Facilities Information

The Department has recently conducted a facilities survey of LEAs that includes information on the condition of structures and building systems.

State's Role in Facilities	
Financial Assistance	Michigan's Department of Education does not provide school construction aid, but the Department of Treasury provides loans to help LEAs meet their debt service obligations. To qualify for a loan, LEAs must meet certain statutory requirements and must provide information on probable future enrollments and the condition of existing facilities. LEAs may borrow whatever amount is needed to avoid defaulting on a loan. The state finances the program by issuing bonds or notes and passes on its interest rate to LEAs. LEAs determine when they will begin repayment but must either complete repayment within 5 years of the last bond maturity date or increase their millage rate.
Technical Assistance	Staff at the Department of Education provide information and limited technical assistance on state requirements to architects and others acting on behalf of LEAs. The state must review facilities projects costing more than \$15,000, but because of the staff's small size, the Department of Education has entered into interagency agreements with the Department of Labor and the State Fire Marshal to review projects for compliance with various building codes. Department of Treasury staff provide information to LEAs on requirements and procedures of the loan program, and they review educational specifications of architectural plans for conformance with state guidelines.
Facilities Information	Department of Education staff have access to records maintained by the State Fire Marshal's Office on all construction projects costing more than \$15,000. However, neither the Department of Education nor the Department of Treasury maintains information on the condition of school facilities.

State's Role in Facilities

Financial Assistance	Minnesota has six state funding programs for school facilities. The capital expenditure facilities program, the largest in dollar terms, provides LEAs with, on average, \$2 in aid for each \$1 they levy for a total of \$128 per student to use for construction, renovation, and major maintenance. The relative amount of the state and local shares is based in part on each LEA's ability to pay. The second program provides project-by-project funding for such projects as cleaning up hazardous materials and correcting health and safety problems. The amount of funds received is also based on each LEA's ability to pay. Of the remaining four programs, two target facilities funding for consolidating LEAs, and two lend money to LEAs for facilities-related projects, partly on the basis of the LEAs' tax capacities.
Technical Assistance	The Department of Education provides LEAs with information on facilities regulations, processes, and planning, and it conducts workshops on financial and health and safety issues. State law also requires the Department to review all proposed construction projects costing more than \$400,000.
Facilities Information	In 1991, the Department conducted a facilities inventory survey containing such information as age, square footage, and condition of structures and building systems. This inventory was used to estimate costs for schools that needed replacement or had major deferred maintenance. The department annually updates its data on facility age and square footage.

State's Role in Facilities

Financial Assistance	Mississippi provides funding for school facilities construction through two programs. One program provides LEAs with annual entitlements at a flat rate of \$24 per student. LEAs may let their entitlements accrue and request the funding for specific projects as needs arise, and they may also obtain advances on anticipated future entitlements. If requests from LEAs outstrip funds available, the Department of Education prioritizes requests on these factors: gravity of the building's condition, the LEA's ability to pay, environmental needs, and enrollment growth of the LEA. Part of the money appropriated for this \$20 million program goes to retire the debt on earlier state bonds used to fund school construction. Mississippi's second program provides about \$16 million annually for school facilities and transportation, with allocations to LEAs on a per student basis.
Technical Assistance	Upon request, Department of Education staff provide LEAs with technical assistance such as information needed to help LEA officials determine reasonable project costs. Regarding compliance activities, Department staff review and approve architectural drawings for all state-funded projects to ensure that projects meet building codes and education specifications.
Facilities Information	The Department of Education maintains a building inventory showing the age, location, type of space, handicapped accessibility, and overall condition of each building. The inventory is updated through surveys to LEAs every 5 years. The Department also annually updates information on the number of classrooms with and without air conditioning.

State's Role in Facilities

Financial Assistance

The Missouri Legislature authorized two new facilities funding assistance programs for school districts effective state fiscal year 1996. The first program established a state bonding authority that will issue bonds for LEA capital projects. Under this program, the state guarantees the bonds, which gives them a higher rating and consequently a lower interest rate for LEAs. Additionally, the bonding agent pays administrative costs. The second program is a revolving fund for construction projects, with 75 percent of the fund awarded as 10-year loans and 25 percent as grants. To be eligible, the project must be part of a long-range capital improvement plan submitted by the LEA; LEA wealth and enrollment growth are considered in determining which projects receive funding. The legislature has not yet appropriated funds for the revolving fund programs, but the Department intends to request funding for fiscal year 1997.

Technical Assistance

The Department conducts four workshops a year for support service personnel and provides LEAs with information on the Americans With Disabilities Act, asbestos abatement, and safety and security issues.

Facilities Information

The Department currently does not collect information on the condition of school facilities. Department officials said they hope to begin doing so when the revolving fund program is funded.

State's Role in Facilities

Financial Assistance	Montana provides facilities funding to LEAs through a debt service subsidy program begun in 1993. To be eligible for the subsidy program, a LEA must have a taxable valuation per pupil that is lower than the statewide average. For qualifying LEAs, all facilities projects for which bonds were sold after July 1, 1991, are entitled to funding. If the annual program appropriation is less than the total amount needed for all qualifying projects, funding is prorated, with each LEA receiving the same percentage of its entitlement.
Technical Assistance	The Department of Education provides information to LEAs on state funding for facilities, school bond election procedures, and requirements of state accreditation standards for school facilities. No compliance activities were reported.
Facilities Information	State officials reported they collect limited or no information on facilities.

Total	\$553,183,000	Temporary building	6
Per student	\$1,945	Percent of schools reporting a need to upgrade or repair on-site buildings to good overall condition	75
State funding for K-12 school facilities, 1993-94		Reported range of amounts needed to upgrade or repair a school to good overall condition	\$900 to \$19,000,000
Total	No assistance provided		
Per student			
Number of SEA facilities-related staff (FTEs)	0		
Other state agencies involved in school facilities:			
Justice Department-State Fire Marshal, Department of Commerce, Department of Natural Resources			

State's Role in Facilities

Financial Assistance	Nebraska does not provide financial assistance for facilities.
Technical Assistance	State officials reported they do not provide technical assistance or perform compliance reviews related to facilities.
Facilities Information	In 1993, the results of a one-time survey examining the reported condition of Nebraska schools were published by the University of Nebraska at Lincoln. The study also included such related issues as LEA population changes, delayed maintenance, and ability to implement technology.

State's Role in Facilities

Financial Assistance	In 1995, the Nevada Legislature made a one-time appropriation of \$500,000 to cover extraordinary need in two school districts. Other than this appropriation, the state does not currently provide funding assistance for facilities.
Technical Assistance	State officials reported they do not provide technical assistance or perform compliance reviews related to facilities.
Facilities Information	The Department of Education maintains an inventory of schools; including information on number and square footage of buildings, and it also maintains information on class size. The inventory is updated about every 2 years to provide information for the legislature during the budget process. No information on facilities condition is collected.

State's Role in Facilities

Financial Assistance

Since 1956, New Hampshire has reimbursed LEAs for a percentage of construction debt incurred through bonds, capital reserve fund expenditures, or tax levies. The state contribution ranges from 30 to 55 percent, with consolidated and cooperative districts receiving the higher percentages. LEAs can receive an extra 20 percent for portions of projects attributable to the construction of kindergartens. (New Hampshire is the only state without mandatory kindergarten.) The state reimburses districts for the longest period of time required by the funding instruments or for 5 years, whichever is longer.

Technical Assistance

The Department of Education provides information to LEAs--particularly to business managers--on facilities regulations and requirements, including advising on needs assessments and educational program requirements. Department staff have also helped plan a workshop for the New England School Development Council. The department provides mandatory review and approval for all projects receiving state funding.

Facilities Information

The Department maintains information limited to financial records and the plans of projects submitted within the past 5 years but does not collect information on the condition of facilities.

State's Role in Facilities

Financial Assistance

New Jersey provides funding for capital outlay projects, including school facilities construction, through a debt service aid program. LEAs receive a percentage of their annual debt service requirement on the basis of their degree of financial need which is currently measured by property valuation and income. To receive funding, LEAs must pass a bond referendum or enact a bond ordinance and be eligible for state foundation aid. All eligible LEAs receive funding. If the amount appropriated is too low to provide all LEAs with 100 percent of the entitlement, funds are prorated to give each LEA the same percentage of the entitlement amount.

Technical Assistance

The Department of Education provides information to LEAs on facilities regulations, processes, and cost estimates as well as architectural, engineering, and legal matters. Staff make site visits on request to provide guidance on the use of space, and they inspect sites proposed for private schools for the handicapped. They also review education specifications and architectural plans for compliance with applicable codes, and they review and approve LEA 5-year plans containing enrollment projections, a capacity analysis, and a list of capital projects needed to meet the projected enrollment.

Facilities Information

State officials reported they collect limited or no information on facilities.

State's Role in Facilities

Financial Assistance

New Mexico provides financial aid to LEAs for school facilities through three programs. The first provides funding for building and renovating classrooms or purchasing portables to LEAs with a critical need. To be eligible, LEAs must be bonded to capacity and unable to meet facilities needs because of low property wealth. To receive assistance under this program, LEAs apply to a council consisting of state officials from the executive and legislative branches as well as from three education agencies. The council develops funding criteria, visits LEAs that apply for funding, and determines which projects to fund and at what level. The second program provides funding primarily for major maintenance, buses, and school furnishing projects. To be eligible for state aid under this program, a LEA must pass a 2-mill levy lasting a maximum of 3 years. The state pays the difference between the amount raised by the local levy and the LEA's guaranteed program amount, which is calculated using three factors--the tax rate of the levy, a flat dollar amount, and a LEA's total program units as derived from the New Mexico equalization funding formula. Under the third program, LEAs apply directly to the legislature for direct appropriations to support construction, maintenance, and other projects. The legislature decides which projects to fund under this program.

Technical Assistance

The Department of Education provides information and guidance on facilities regulations and requirements, facilities planning, and such related issues as accessibility and energy. The Department reviews architectural plans for compliance with education specifications.

Facilities Information

The Department is planning a survey of all schools to determine the number of classrooms, but it does not plan to collect information on the condition of school facilities.

State's Role in Facilities

Financial Assistance	New York State provides facilities funding through a program that provides assistance on an equalization basis. The program pays from 0 to 95 percent of approved expenditures for construction and debt service, with the percentage rising as a LEA's ability to pay decreases. The average percentage paid by the state is 49 percent. Department approval of expenditures is based upon capacity and labor market indexed cost allowances.
Technical Assistance	Facilities-related staff in the Department of Education, recently reduced from 24 to 19 full-time-equivalent positions as part of a general Department downsizing, provide information on regulations and facilities planning as well as architectural, engineering, and legal issues. Among other things, they also review architectural plans for compliance with building code and education specifications, assess the need for new projects, approve sites, issue building permits, approve leases, certify completed projects for occupancy, and provide on-call assistance for environmental hazard problems. The Department also oversees a fire inspection program that enforces building and fire codes for existing buildings through annual inspections conducted by LEA-hired inspectors.
Facilities Information	The Department is establishing a comprehensive facilities management program with six components: a building inventory database, formal building condition assessments, building preservation plans, long-range educational planning, capital assets preservation plan, and preservation actions. Work has begun on the building inventory. Implementation of the building condition assessments, which will include evaluations of environment, systems performance, and code compliance, is scheduled for 1997. In the meantime, the Department continues to maintain other types of facilities information, such as LEA long-range facility plans and copies of annual fire inspection reports.

State's Role in Facilities	
Financial Assistance	North Carolina provides school construction aid to LEAs through several programs. One uses part of corporate income tax revenues to provide counties with an allotment based on average daily membership. LEAs within a county receive a pro rata share. LEAs let their allotments accrue until they are ready to use them for a specific project, at which time they must match the state's revenues for facilities improvements. A second program uses the first \$10 million from the corporate income tax to award grants to LEAs with the most limited ability to pay to address critical building needs. A third program uses state sales tax revenues for facilities improvements. State law allows counties to levy two one-half cent additions to the state sales tax, 30 percent and 60 percent of which respectively goes to schools. These revenues are distributed to counties on a per capita basis and may be used for public school capital outlay purposes or to retire any indebtedness incurred by the county for these purposes.
Technical Assistance	In fiscal year 1996, the number of facility-related staff at the Department of Public Instruction was reduced from 41.5 full time equivalent employees to 27. Before these cuts, Department staff provided several types of technical assistance. Upon LEA request, they conducted surveys to determine major facility needs, available resources, and building capacities. They also researched such topics as school organization and facility utilization, prepared publications on educational planning, and periodically sponsored workshops for educators, architects, engineers, and maintenance staffs. Regarding compliance activities, Department staff reviewed and approved all building plans for structural and functional soundness, safety and sanitation and conformance with state school facility standards. The Department is reviewing which services to continue providing with reduced staffing levels.
Facilities Information	A 10-year facility needs assessment is updated and reported every 5 years by the LEAs. All existing buildings have been surveyed and rated as to condition by Department staff, providing a basis for LEA assessment. Building rating is determined by several factors, including building age, type of construction, life expectancy, and apparent condition and design adequacy. The Department is compiling information from the LEA assessments and staff surveys into a computerized school building inventory. The Department also captures building inventory information during annual inspections of facilities insured by the state (currently 92 percent of all buildings).

State's Role in Facilities

Financial Assistance	In North Dakota, all public school district construction or renovation projects costing \$25,000 or more require approval by the state Superintendent of Public Instruction. North Dakota has a revolving loan fund that provides about \$5 million each year for school facilities projects. The fund, which originated from taxes on coal, provides loans to LEAs for projects costing \$50,000 or more. To be eligible, LEAs must have an existing indebtedness equal to at least 15 percent of their taxable valuation. District fiscal capacity is considered in determining both the interest rate charged (0 to 6 percent) and the amount loaned.
Technical Assistance	Staff at the Department of Public Instruction do not provide information or technical assistance to districts on an ongoing or systematic basis but have provided a seminar for administrators on the school facilities reference guide. As part of ensuring that accreditation standards are met, Department staff review school facilities to determine compliance with health safety codes.
Facilities Information	In the last year, the state conducted a one-time survey of public school building conditions and now has an inventory of facilities. The survey gathered information on the condition and adequacy of classrooms and other building space, site and building envelope, mechanical and electrical systems, and technology. This information will be used to advise the legislature on school facility needs. LEAs will update the information whenever they go through the construction approval process.

State's Role in Facilities

Financial Assistance

Ohio provides loans to help LEAs pay debt service on bonds for school construction and major renovation. LEAs repay the money with revenues from a .5 mill levy over a maximum of 23 years, after which the state forgives the unpaid balance. A LEA's eligibility for this program is based on the number of inadequately housed students and the percent of bonded debt, and the amount a LEA receive is based on its assessed valuation and the condition of its buildings. The Department of Education prioritizes eligible LEAs on the basis of the number of inadequately housed students, building condition, and LEA wealth. The program originated in 1952 and was reinstated in 1990 after a lengthy hiatus through the 1970s and most of the 1980s. From 1990 to the present, annual program appropriations have ranged from about \$20 million to nearly \$70 million and have improved or replaced a total of about 75 schools. In 1993, the state made an additional one-time authorization of \$45 million for computers and \$50 million for electric wiring for communications technology.

Technical Assistance

The Department of Education provides information and training such as workshops to present changes in regulations or the funding process. The Department also reviews architectural plans for education standards and monitors projects for general financial accountability standards.

Facilities Information

In 1991, the state published a one-time comprehensive study of the cost to bring all public schools up to good condition. For the study, the state contracted with consulting architectural firms to visit every school and assess building condition--with emphasis on structure and systems--using a standard evaluation instrument.

State's Role in Facilities

Financial Assistance Oklahoma does not provide financial assistance for facilities.

Technical Assistance The Oklahoma Department of Education provides information and training to LEAs on facilities-related regulations, requirements, and processes, including planning, architectural, engineering, and legal issues. State law requires that the Department review all school facility plans for compliance with the building code and with education specifications before schools are built.

Facilities Information The Department collects and reports LEA-provided inventory information, including the number, age, location, and use of facilities, as well as the condition of structures and building systems.

Reported range of amounts needed to upgrade or repair a school to good overall condition	\$2,600 to \$31,475,000

State's Role in Facilities

Financial Assistance	In fiscal year 1995, Oregon provided a one-time appropriation of \$10 million in lottery revenues for school facilities funding. To be eligible for funding, LEAs were required to submit a properly completed application and provide a 1 to 4 funding match. Thirty-one LEAs, selected through a random drawing of all eligible LEAs, received funding of up to \$500,000 each for facilities construction, renovation, and maintenance. Oregon is currently adjusting to a rollback in property taxes, and no additional grants are planned.
Technical Assistance	The Department of Education provides three 1-day training sessions a year to LEAs on the regulations, requirements, and processes for complying with the Asbestos Hazard Emergency Response Act.
Facilities Information	The Department collects information from LEAs on maintenance costs as part of its annual audit report but does not collect information on the condition of facilities.

State's Role in Facilities

Financial Assistance

Pennsylvania has a program that reimburses LEAs for school facility construction on the basis of building capacity, approved expenditures, and a LEA's ability to pay. To qualify for funding, a project must first pass through an 11-part approval process administered by the Department of Education. Once the project is approved, the reimbursement rate is generally based on the building's capacity to support present or future enrollments multiplied by a legislated per pupil dollar amount. This rate is then adjusted for the LEA's relative wealth.

Technical Assistance

Department of Education staff provide a limited amount of technical assistance to LEAs; most staff time is devoted to managing steps in the plan approval process. Regarding compliance activities, Department staff review and approve architectural drawings for conformance with education specifications and building codes for all projects, regardless of the involvement of state funding. They also review and approve facility plans for those LEAs submitting project applications.

Facilities Information

The Department does not collect substantial facilities data, but it does require that LEAs requesting reimbursement submit a one-page summary of information that includes a list of each building in the district, the construction year, construction type, number of stories, and a one-digit code indicating the building's condition. Since these summaries are collected when LEAs submit project applications, the SEA may receive the data from some LEAs only once every 5, 10, or 20 years. The information is maintained with individual projects and is not compiled.

State's Role in Facilities

Financial Assistance

Rhode Island reimburses LEAs for debt service on capital construction projects. To qualify for aid, projects must go through a state-level review process to determine the necessity of construction. Once projects are approved, LEAs can request reimbursement beginning the fiscal year after project completion. The rate of reimbursement is based on the wealth per pupil of the LEA relative to that of the state as a whole, with the average statewide reimbursement rate being 38 percent. The state also provides a debt service adjustment for heavily burdened LEAs, although few LEAs have qualified for this entitlement since 1990. An additional 4 percent is available for regional LEAs undertaking renovation projects and for projects for which 75 percent of the cost is for energy conservation, asbestos removal, and/or handicapped access.

Technical Assistance

With only 0.25 full-time-equivalent positions devoted to facilities, the Department of Education provides limited technical assistance. The staff person provides guidance and responds to questions on the reimbursement process and shares copies of construction plans and materials with LEAs planning projects. The Department also performs minimal compliance activities. It reviews and approves plans against education specifications and square footage guidelines. It also reviews whether core facilities are sufficient to support enrollment, and it is responsible for obtaining written assurances from LEAs that all plans have been approved by appropriate state and local agencies.

Facilities Information

On the basis of an inventory developed in 1989, Rhode Island has baseline data on its school plant statewide. The inventory includes, among other things, square footage, age, construction type, primary use of the building, and grades housed. The Department also asked LEAs to rate the adequacy of the site; fire safety; and heating, ventilation, and air conditioning and electrical systems. The inventory was updated once, in 1990.

State's Role in Facilities

Financial Assistance	South Carolina provides financial assistance to LEAs for school construction through two programs. One provides each LEA with a flat rate of \$15 per kindergarten student and \$30 per student in grades 1 through 12. The second program, part of the state's Education Improvement Act passed in 1984, provides funding to each LEA using a formula that considers LEA ability to pay. Use of the funding is limited to projects directly related to the instructional program.
Technical Assistance	Upon LEA request, Department of Education staff provide technical assistance such as conducting building surveys, assessing building condition, and determining the amount of work needed to bring buildings to code. They also develop guidance on cost containment and school design considerations and routinely write informational pieces on facilities maintenance. They review and approve building plans for compliance with education specifications and building codes for all projects, regardless of the involvement of state funding. They also review and approve building sites, inspect construction, and issue occupancy certificates.
Facilities Information	In 1993, the Department conducted a one-time study of the condition of school buildings to establish the level of statewide need. The study used a combination of existing capital improvement studies submitted by LEAs, state-conducted assessments, and assessments conducted by LEA architectural staffs.

State's Role in Facilities

Financial Assistance South Dakota does not provide financial assistance for facilities.

Technical Assistance In South Dakota, the State Fire Marshal's Office is responsible for school facilities at the state level. Before 1994, these responsibilities were shared with the Department of Education and Cultural Affairs. The Fire Marshal's Office provides some technical assistance to LEAs. It responds to district questions on compliance with various building and life/safety codes and provides training to district personnel on such topics as handling hazardous materials, safety compliance, and building evacuation. The Fire Marshal's Office also reviews and approves all renovation and new construction plans for compliance with building and life/safety codes and is responsible for inspecting all schools every 2 years.

Facilities Information The State Fire Marshal's Office maintains computerized records of its inspections but does not gather information on the physical condition of buildings.

State Fire Marshal's Office, Health Department			

State's Role in Facilities

Financial Assistance	Tennessee provides funding for school facilities through a capital outlay component of its basic education support program. Funding formulas generate each LEA's capital outlay need on the basis of the LEA's average daily membership and on square footage costs. Each LEA contributes a proportionate share of this amount on the basis of its local fiscal capacity, with the state funding 50 percent of the total statewide need.
Technical Assistance	The Department of Education has no staff dedicated to school facilities issues and provides no facilities-related technical assistance to LEAs. Local school systems are responsible for complying with city, county, and state codes and regulations regarding planning of new buildings, alterations, and safety. The Department does not review building plans and specifications (this is done by the State Fire-Marshal's Office). However, the Department is responsible for reviewing such documents for any projects addressing accessibility for disabled children to ensure that federal requirements are met.
Facilities Information	State officials reported they collect limited or no information on facilities.

State's Role in Facilities

Financial Assistance	In 1995, the Texas legislature authorized a state school facilities funding program as part of major revisions to the state education code. An appropriation of \$170 million for the current 2-year budget period (1995-97) was made and LEA eligibility for aid is based on formulas designed to assist those districts with lower wealth and high property taxes and tax debt. Most districts currently receiving aid are small and rural, with growing enrollment. Code revisions also encourage alternative construction strategies, such as competitive bids, sealed proposals, and catalog purchases, as well as purchasing contracts if they provide LEAs with the best facilities value.
Technical Assistance	The Education Agency provides information and limited training on facilities regulations, design, planning, construction, and operations, as well as on financial, legal, architectural, and engineering issues. The agency also oversees a state requirement that, for schools built after 1992, LEAs must certify that the school meets state standards, including space requirements, educational adequacy, and construction quality on the basis of building codes and state and national regulations.
Facilities Information	In 1992, Texas conducted a legislatively mandated study of the condition of all school structures and building systems. Information was gathered through site inspections carried out primarily by architects and engineers.

State's Role in Facilities

Financial Assistance	Utah has three facilities funding programs providing LEAs with assistance for renovation, remodeling, additions, new buildings, land purchase, and debt service. Two of the three funding programs provide grants; the third program provides no-interest loans. Only districts below the average assessed property value per student are eligible for state funding. Additionally, districts must have exhausted alternatives to construction, such as year-round use of facilities, extended class days, and portable classrooms.
Technical Assistance	The Department of Education provides LEAs with guidelines on size and use of facilities and assists them in developing 5-year facilities plans. It also assists LEAs in developing comprehensive emergency management plans for natural disasters and preparedness planning for fires and chemical spills. The Department reviews architectural plans and makes recommendations on educational specifications such as space needs.
Facilities Information	The Department collects information on the square footage of schools, the number of occupants, and (for insurance purposes) estimated replacement costs. Districts update the information annually and also when building or remodeling changes occur. The Department does not collect information on the condition of facilities.

State's Role in Facilities

Financial Assistance

Vermont's school construction program is in a period of transition. In March 1996, the state repealed all statutes and rules governing the construction program and funding for new projects, as it began considering ways to deal with escalating construction costs. If new laws are not enacted by September 1996, all repealed rules are to be reenacted. As of May 1996, new legislation had passed the General Assembly and was pending the governor's signature.

Before the repeal, Vermont awarded school construction aid for projects meeting eligibility requirements and demonstrating urgent need as determined by Department of Education criteria. Except for emergencies, projects were funded on a first-come, first-served basis until available funds were exhausted. Under the new legislation, approved projects would be prioritized by rules established by the State Board of Education. The new legislation also targets funding towards LEAs with less ability to pay. Before the repeal, the state provided 30 percent of the cost for most projects. The new legislation awards LEAs 0 to 30 percent aid based on their property wealth using the same funding categories as those used in the basic foundation funding program plus a sliding scale. State aid for approved vocational education projects, formerly 100 percent, would be halted by the new legislation. Finally, before the repeal, Vermont awarded debt service aid to LEAs eligible for foundation funding at the same percentage share provided in the general state aid formula. The new legislation caps the reimbursement rate at 64 percent.

Technical Assistance

Staff of the Department of Education provide assistance to LEAs through all phases of construction. Most of the assistance is individualized, but Department staff have also conducted some workshops. Before the repeal, Department staff also reviewed architectural plans for accuracy and compliance with locally developed educational specifications and worked with the Department of Labor and Industry to ensure compliance with building codes.

Facilities Information

The Department has periodically surveyed LEA superintendents about anticipated construction projects and their estimated costs but does not collect information specifically about the condition of school buildings.

State's Role in Facilities

Financial Assistance

Virginia has two state loan programs for school facilities. The Virginia Public School Authority is a bond bank that issues about \$100 million in bonds annually to LEAs that lack ready access to low-cost financing. It sells bonds on the public market and uses the proceeds to purchase general obligation bonds from LEAs. LEAs pay the Authority's interest rate plus a small percentage to cover administrative costs. A second loan source is the Literary Fund, funded primarily from fines, forfeitures, unclaimed property, and repayments of prior loans. LEAs may borrow up to \$5 million at an interest rate that is based on the LEA's ability to pay. Low-wealth districts receive priority for funding. In addition to these loan programs, Virginia provides grant assistance to LEAs for maintenance projects as part of its basic education support program. The state's share of a \$5 per pupil allocation is based on the LEA's ability to pay. LEAs can use the allocation for maintenance needs or debt service.

Technical Assistance

The Department of Education has three architects and a support technician who provide technical advice to LEAs, conduct workshops on such topics as state and federal health and safety requirements, conduct research, and prepare long-range capital improvement plans for LEAs. The Department is also responsible for establishing minimum standards for public school construction, such as classroom size and equipment needs. However, Department staff perform few compliance activities. LEAs submit copies of final building plans, but the Department does not review them.

Facilities Information

In 1991 and 1993, the Department conducted a survey to measure present and future facility needs. The survey collected summary information at the district level on the number of schools experiencing various facility problems such as overcrowding and structural concerns. The survey also asked for LEA estimates of capital improvement, deferred maintenance, and anticipated maintenance needs. In addition to the survey data, the SEA also maintains records of all construction projects dating back to the 1950s. It also collects and publishes cost data on new buildings and renovations every year.

State's Role in Facilities

Financial Assistance	Washington state provides funding assistance for school construction and major renovation as an entitlement to eligible schools. Project eligibility is based on the age and condition of the building as well as enrollment growth. The amount of funding LEAs receive ranges from 20 to 90 percent of project construction costs and is based on assessed real property values divided by the number of students in the school district. A major source of state funding is timber sales from state lands dedicated to that use as part of the 1889 common school trust land grant.
Technical Assistance	The SEA school facilities section staff provide facilities information to school districts and other state and federal agencies. The section also reviews all state-assisted school construction projects to ensure compliance with state laws--for example, paying appropriate wages to construction workers or using minority- and female-owned contractors.
Facilities Information	The SEA collects districtwide inventory and condition information when LEAs apply for state funding assistance. Information collection is ongoing and updates take place, at a minimum, each time a LEA requests state assistance. The information includes a building condition assessment that rates a school's interior, exterior, systems, and safety. The assessment assigns scores using weighted categories based on repair or replacement costs. These scores are used to establish the annual project priority list for the distribution of state funds.

State's Role in Facilities

Financial Assistance

West Virginia provides state school construction aid through four programs administered by the School Building Authority of West Virginia, established in 1988 as a separate agency from the Department of Education. Since 1988, \$644 million in school construction funds has been generated, of which \$506 million has come from the School Building Authority. The largest funding program provides competitive grants to LEAs, with grant proposals evaluated against several criteria, such as how well the project addresses student health and safety and economies of scale. Two smaller programs are tailored to (1) helping LEAs with emergency situations, such as flood or fire damage, and (2) providing funds for statewide projects, such as rewiring schools for modern technology. A fourth program helps LEAs with smaller projects costing between \$50,000 and \$500,000, such as building health and safety improvements and additional classrooms. To qualify for this program, LEAs must have a comprehensive maintenance program in place. Because of a court decision against the state's method of financing bonds issued by the Building Authority, no money was provided for these programs in fiscal year 1994. Legislation was later passed to dedicate \$230 million to begin financing future construction on a pay-as-you-go basis for the next 10 years.

Technical Assistance

Staff of the School Building Authority provide guidance as LEAs go through the facility planning and construction process. They attend job meetings at the LEA to ensure that curriculum requirements are addressed, that the quality of construction is acceptable, and that expenditures stay within budget. They also review and approve building plans for projects using state funds and coordinate other state agencies' review of plans for compliance with building and fire codes and other state requirements.

Facilities Information

Every 10 years, LEAs are required to submit a comprehensive facilities plan, which includes an evaluation of building conditions. A standard rating form is used to evaluate building systems, structures, and curriculum program space. The weighted ratings are based on how well facilities meet state standards compared with other buildings in the state. The evaluation, first conducted in 1990 by personnel trained by the School Building Authority, will be entirely redone in 2000. In the interim, LEAs must re-evaluate facilities whenever they request state funding.

State's Role in Facilities	
Financial Assistance	Wisconsin does not have a specific funding program devoted to school facilities, but its basic education support program provides reimbursement that can be used for construction expenditures. Under this program, the state provides aid to LEAs for a percentage of their total education costs per student, with higher aid given to LEAs with lower property wealth. Through fiscal year 1995, the aid rate ranged from 0 to 70 percent of LEA education costs; the average was 40 percent. Because of differences in the rate of aid LEAs receive on their expenditures, the Department of Public Instruction cannot determine the precise amount the state reimburses districts for school facility construction.
Technical Assistance	The Department of Education provides limited technical assistance to districts. The staff help district officials interpret the building code and health and safety regulations, present occasional on-site workshops, coordinate referrals to other state agencies, and provide assistance with LEA facility plans. The Department does not receive any copies of architectural plans; these are reviewed by other state agencies.
Facilities Information	The Department has limited information on school facilities and the condition of buildings. On the basis of an inventory developed in 1988, the Department has data on the type of fuel source used in each building and the date of construction. The Department also keeps records of formal citizen complaints filed with the state on the condition of facilities. Department staff along with staff from the Department of Labor, Industry, and Human Relations are responsible for investigating the complaints and may issue orders to LEAs to correct any code violations found. The Department of Labor, Industry, and Human Relations also inspects all schools once every 5 years for compliance with building code regulations. Copies of the inspection reports are routinely provided to the Department of Public Instruction.

State's Role in Facilities

Financial Assistance

Wyoming dedicated federal mineral royalties from school lands to school capital construction several years ago and added state mineral royalties in 1994-95. Funding is expected to be about \$13 million per year. Most of the money is made available as grants, but loans can also be provided. To receive funds, LEAs must be bonded to at least 80 percent of capacity, and the taxable wealth is one determinant of the amount of funding that eligible LEAs receive. The State Superintendent of Public Instruction reviews project requests, evaluates them on the basis of factors such as space and instructional needs, and makes recommendations to the State Farm Loan Board, which has final approval. In making decisions about projects, the Superintendent also uses a 1991 inventory of schools, which prioritized 403 capital projects. Another facilities funding program, not used in the past 5 years, provides funding for debt service on district capital construction bonds, targeting LEAs that have passed bonds but have declining tax bases.

Technical Assistance

The Superintendent of Public Instruction's Office provides information to LEAs on facilities requirements and guidance on navigating the state funding process. Staff make occasional site visits at LEA request.

Facilities Information

The 1991 inventory of schools, discussed above as being the source of a prioritized list of projects, was carried out by independent contract inspectors and included detailed information on the condition of structures and building systems. In 1994, the Superintendent of Public Instruction's Office updated the information by having districts note any changes that had occurred. In the future, the Office hopes to carry out an inspection-based study about once every 6 years, with updates 3 years later.

Ordering Information

The first copy of each GAO report and testimony is free. Additional copies are \$2 each. Orders should be sent to the following address, accompanied by a check or money order made out to the Superintendent of Documents, when necessary. VISA and MasterCard credit cards are accepted, also. Orders for 100 or more copies to be mailed to a single address are discounted 25 percent.

Orders by mail:

U.S. General Accounting Office
P.O. Box 6015
Gaithersburg, MD 20884-6015

or visit:

Room 1100
700 4th St. NW (corner of 4th and G Sts. NW)
U.S. General Accounting Office
Washington, DC

Orders may also be placed by calling (202) 512-6000 or by using fax number (301) 258-4066, or TDD (301) 413-0006.

Each day, GAO issues a list of newly available reports and testimony. To receive facsimile copies of the daily list or any list from the past 30 days, please call (202) 512-6000 using a touchtone phone. A recorded menu will provide information on how to obtain these lists.

For information on how to access GAO reports on the INTERNET, send an e-mail message with "info" in the body to:

info@www.gao.gov

or visit GAO's World Wide Web Home Page at:

NOTICE

REPRODUCTION BASIS

☐

This document is covered by a signed "Reproduction Release (Blanket)" form (on file within the ERIC system), encompassing all or classes of documents from its source organization and, therefore, does not require a "Specific Document" Release form.

☒

This document is Federally-funded, or carries its own permission to reproduce, or is otherwise in the public domain and, therefore, may be reproduced by ERIC without a signed Reproduction Release form (either "Specific Document" or "Blanket").
